Overview:

The VCL-MX Version 5 - 12 E1 Multiplexer is a carrier class and cost-effective bandwidth provisioning equipment designed to manage and deliver services from the optical core to the access.

VCL-MX Version 5 – 12 E1 Multiplexer may be used for inter-connecting legacy voice and data networks, provisioning and managing bandwidth on a E1 channelized level as well as 64Kbps, DS-0 time-slot level and as a digital-access cross-connect equipment. This 12 x E1 Multiplexer can be used in a Point-to-Point, Point-to-Multi point, Add-Drop (drop-insert), Tree and Star topology applications.

Introduction

VCL-MX Version 5 – 12 E1 Multiplexer may be used for inter-connecting legacy voice and data networks, provisioning and managing bandwidth on a E1 channelized level as well as 64Kbps, DS-0 time-slot level and as a digital-access cross-connect equipment. Due to the changing traffic patterns, there is a need to support multiple services from the same equipment like integrated data transport, better network management etc. This necessitated evolution to next-generation E1 Multiplexer. Single control card and redundant power supply options make it an ideal chose for network service providers seeking to integrate and provide legacy and the next generation services from a single platform.

The next generation E1 Multiplexer has emerged as one of the most economical and technologically viable solutions for transmitting both voice and data over carrier networks. This technology offers savings on investments/power and space to service providers.

Valiant Communications provides efficient solutions in this field using the E1 Multiplexer series products. E1 Multiplexer provides a full range of solutions in this evolving field of next generation telecom solutions. Power Supply

VCL-MX Version 5 – 12 E1 Multiplexer is powered by a -48V DC power supply, which drives the various sub-systems in it.

The following features are supported:

- Allows for power monitoring by LED
- Reverse polarity and inrush current limiting
- 1+1 Redundancy

Telco Networks Providing Voice and Data Services

VCL-MX Version 5 – 12 E1 Multiplexer is an ideal platform to provide high-end data and voice requirement of clients. VCL-MX Version 5 – 12 E1 Multiplexer can be installed at the regional and gateway Points of Presence (POP) locations in order to cater to the ever-growing data requirements of the customers while supporting legacy services at the same time.

The advantage that the VCL-MX Version 5 – 12 E1 Multiplexer provides the Telecom Service provider is as follows:

- The VCL-MX Version 5 – 12 E1 Multiplexer enables network simplifications by collapsing networks, nodes and services into a single multi service device. A smaller number of higher-density nodes and node types enable cost savings as a result of a smaller, more homogenous network to manage.

- The flexible architecture of the VCL-MX Version 5 – 12 E1 Multiplexer series ensures that the network is future proof, and the service provider has the flexibility of choosing a technology he thinks useful at any time in the future with minimal investment.

Applications

The VCL-MX Version 5 – 12 E1 Multiplexer can be configured in linear and bus architectures. It can be used in the core of the network to provide high-speed backbone network.

The VCL-MX Version 5 – 12 E1 Multiplexer could provide the core for cellular or mobile networks between Mobile Switching Centers with subtended.

VCL-MX Version 5 – 12 E1 Multiplexer could also be used to provide versatile cross-connect functionality to connect telephone exchanges in VCL-MX Version 5 - E1 Multiplexer in dense metro areas.
